

GG-One Software Provides Municipalities a One-Stop Solution for Managing Contracts and Insurance

KENNETT SQUARE, Pa., August 17, 2009/PRNewswire/ - GG-One Software, Inc. today announced that the City of Walnut Creek, California, has selected iFastrack to manage contracts and insurance certificates for it's multiple departments.

The iFastrack software allows municipalities an easy way to manage contracts including tracking contract amounts, change orders, amendments, management reviews and City Council approval dates. Additionally, insurance certificates can be tied to the contract and monitored helping to reduce the risk from uninsured contractors. "The City of Walnut Creek needed a comprehensive system to manage/track insurance documents and city contracts for a multi-department environment. iFastrack is proving to be an elegant solution for ensuring the city's risk management goals are attained. This tool allows our front line staff (located in different facilities throughout the city) to quickly request and receive insurance documents which meet the required insurance levels, tying them back to the corresponding contract. We are able to continually train staff on insurance best practices through iFastrack's easy to use system, including reference templates and understandable language. The iFastrack system allows us to stay ahead of certificate cancellation dates, search for insurance certificates in just one database and easily identify what department, person, contract or event a certificate belongs to" said Patrice Olds, City Clerk for the City of Walnut Creek.

"Most municipalities need to manage contracts and proof of insurance" said Phyllis Recca, CEO of GG-One Software. "Many attempt to do this manually, which can create a risk by missing expiration dates for contracts, bonds and insurance policies. With iFastrack, municipalities can use state of the art software to track their insurance certificates and contracts via the Internet from any location."

GG-One Software's flagship Fastrack product has been used for over 15 years by major companies throughout all industries and has become a critical component of their risk management program. While most companies require proof of insurance at the onset of a contract, few actually track the insurance certificate to ensure that 1) policies haven't lapsed and 2) they continue to meet required limit minimums. Without this protection, companies could be held responsible for substantial damages caused by contractors. Most states require Worker's Compensation coverage and consider companies responsible for uninsured persons hired to perform work. The iFastrack software dramatically reduces exposure from non-employee work accidents by providing automated review and notification of missing/expired policies, along with insuring that policy limits meet minimum requirements.

GG-One Software, Inc. is a leading provider of software to track contracts and insurance certificates. GG-One Software's solutions help manage the risk of uninsured contractors, provide critical contract information to project managers and help companies achieve a 'paperless office'. Founded in 1994, GG-One Software serves companies and government agencies across the U.S. and Canada. Visit <http://www.ggonesoftware.com/> or call 1-866-832-0931 for more information.
